

QUANT INTERN PREPARATION

ABOUT THE PANEL

Anirvan Tyagi (EE) – Quant Research Intern, Trexquant
9911130702, anirvant23@iitk.ac.in

Sahil Pandey (EE) – QR Intern, Graviton Research Capital LLP
8302738127, sahilp23@iitk.ac.in

Yatharth Dangi (CSE) – Quant Intern, Quadeye | Ex-Intern, Google
6377153842, yatharth23@iitk.ac.in

WHY QUANT?

Lucrative field.

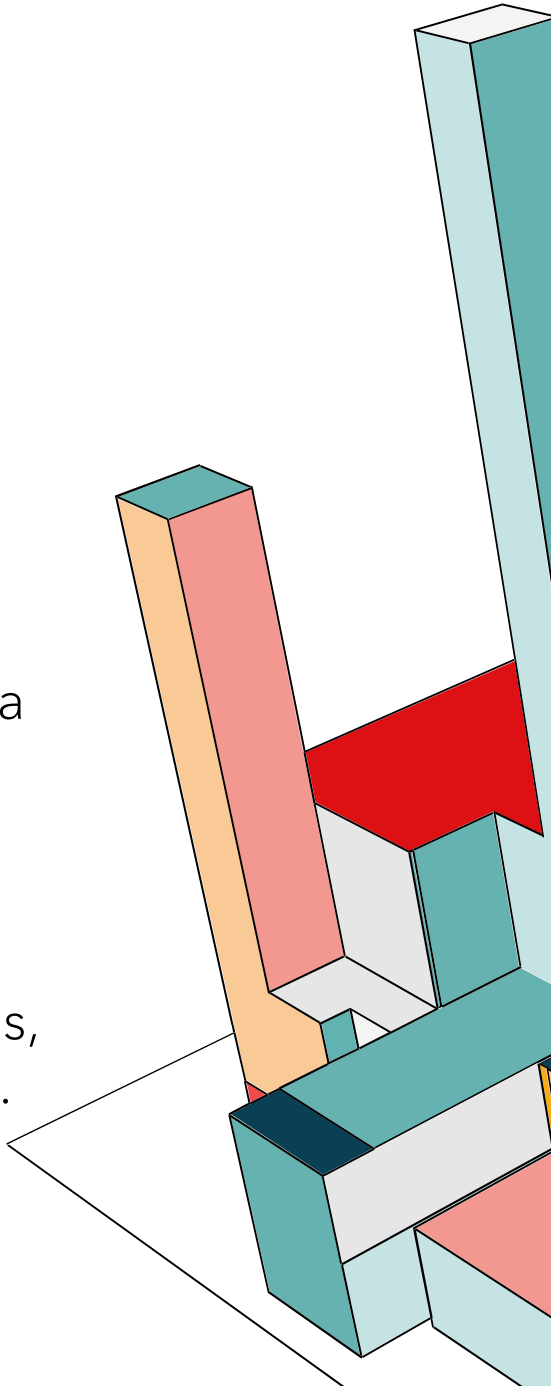

Quant has earned a well-deserved reputation for being one of the most profitable fields currently, and rightly so.

Dynamic Industry

This is one of the few fields, with something for everybody. There has been a boost in the no. of Indian Quant firms as well, which provides a promise of future opportunities.

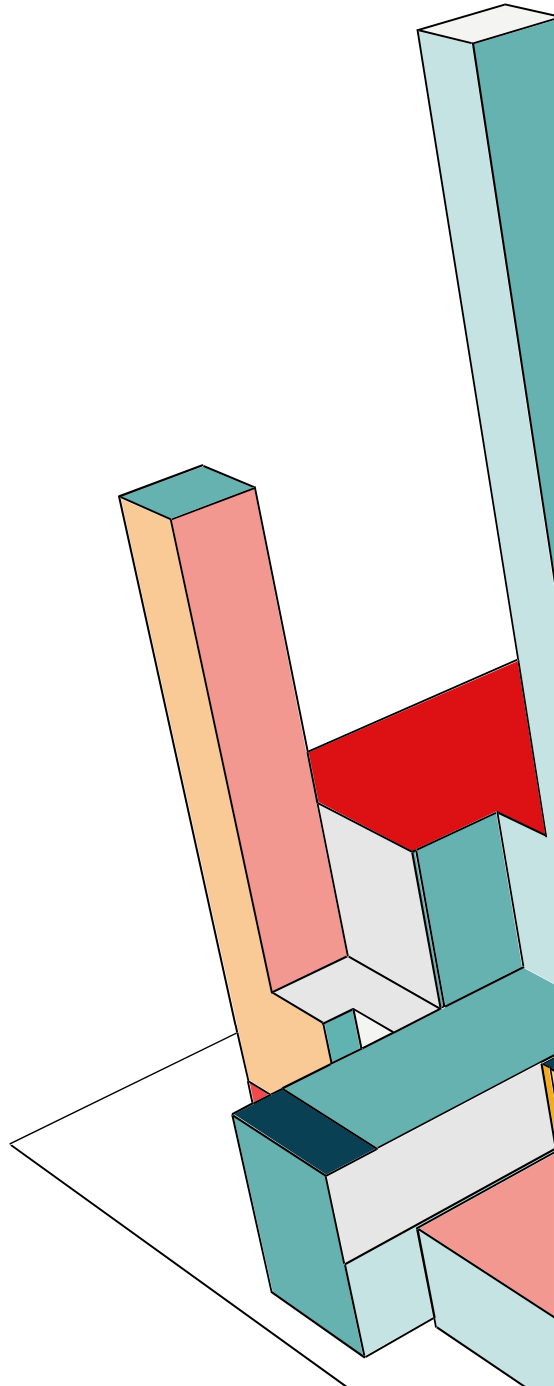

High Focus on Innovation

Quant involves Math, Strategies, Systems, Algorithms. It respects novel ideas, and will involve experiences very different from those developed in college.

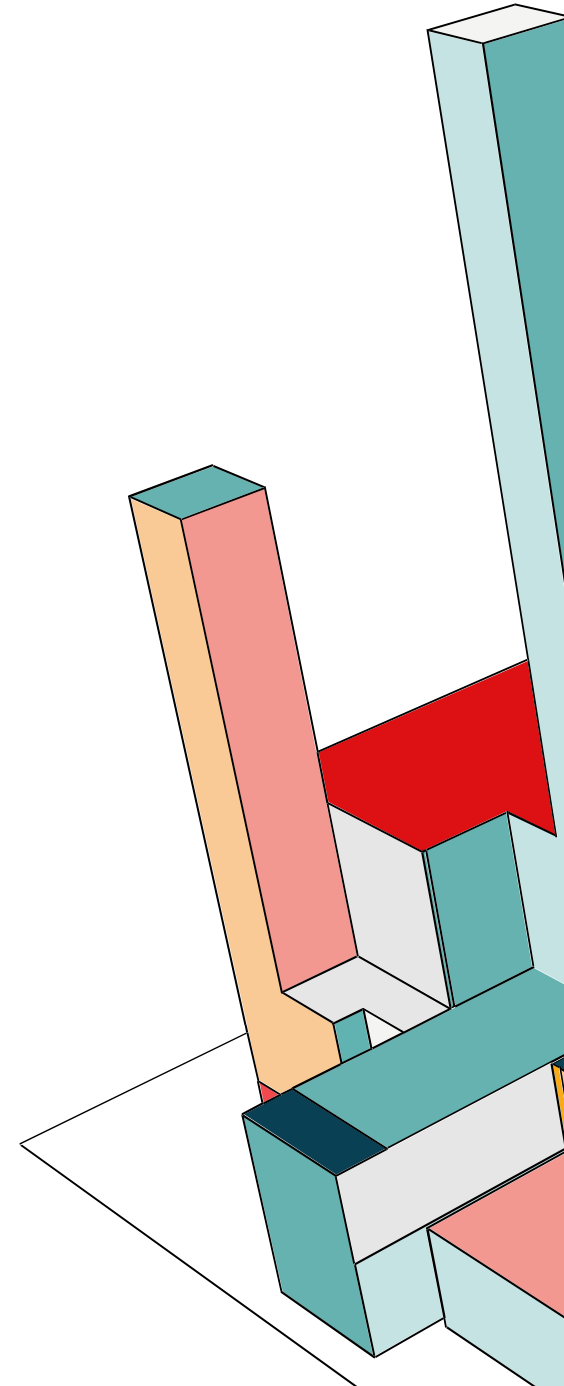

WHY NOT QUANT?

- It is pretty competitive
- The working hours are long
- College Education hasn't given adequate introduction to the field

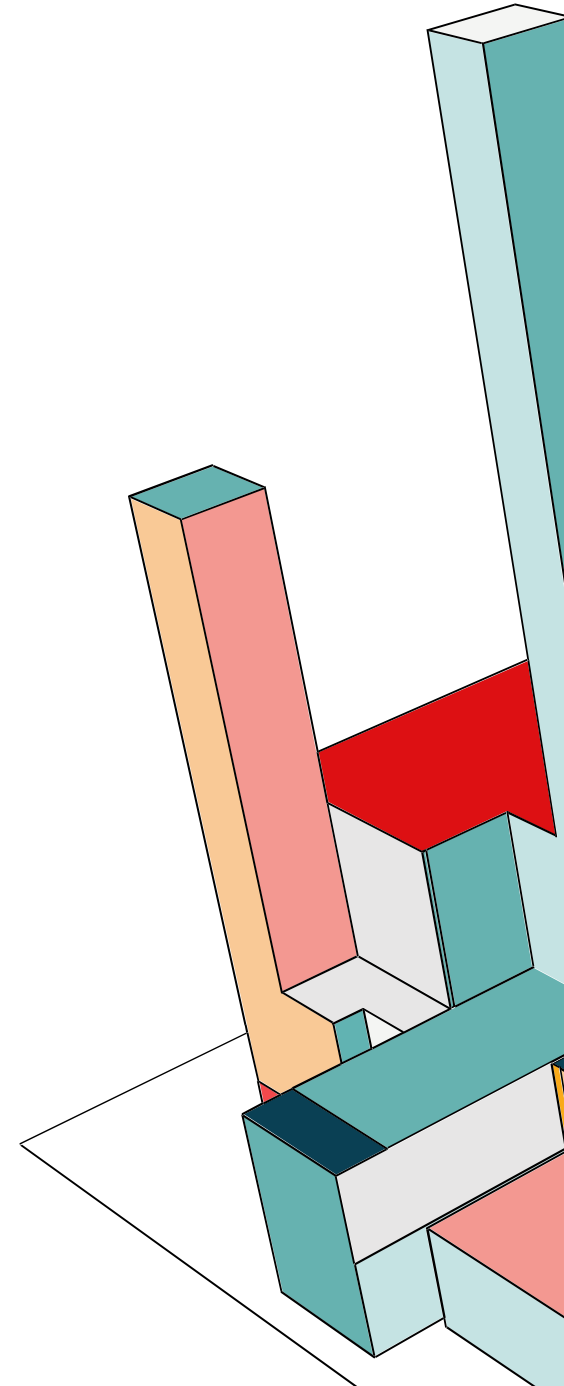

SUMMER TO-DO'S

- Probability and Puzzles
- CF
- DSA
- Systems

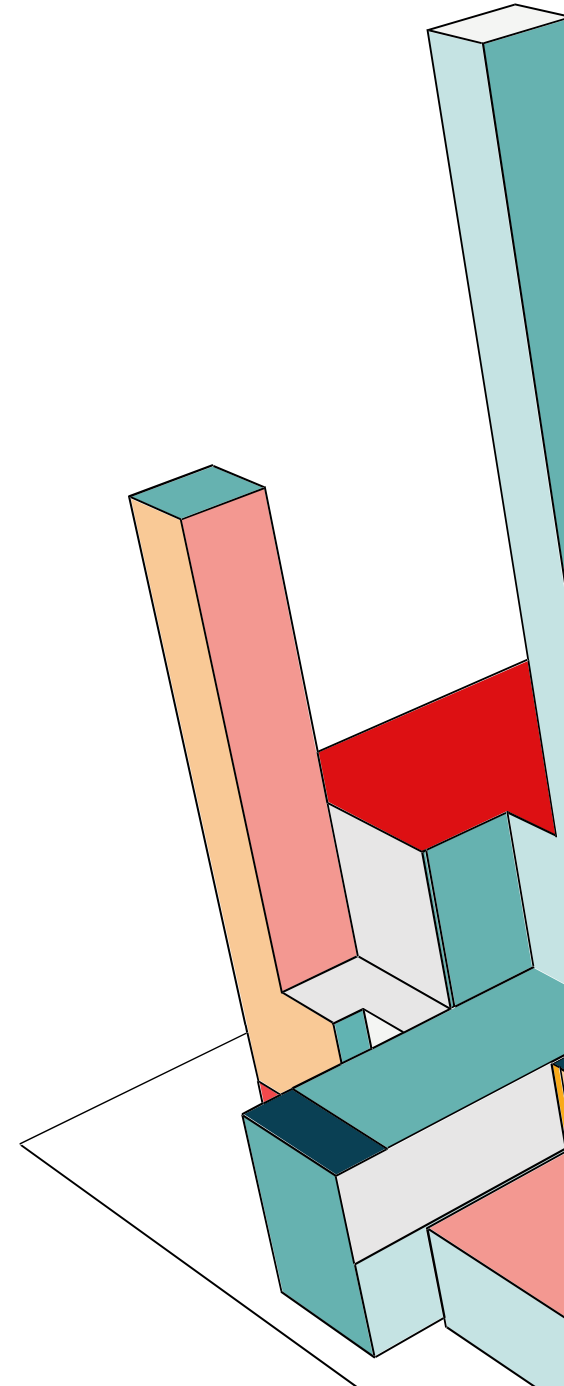

PROBABILITY

- Probability Basics - The theory you learned while preparing for JEE is generally sufficient. Additionally, make sure to understand concepts like random variables and expectation. A good resource for this is [Lec3: CS203 by Prof. Rajat Mittal](#)
- If you have limited time or, otherwise, do the following in priority :
 - Relevant chapters of Xinfeng Zhou
 - 50-Cp
 - Brainstellar

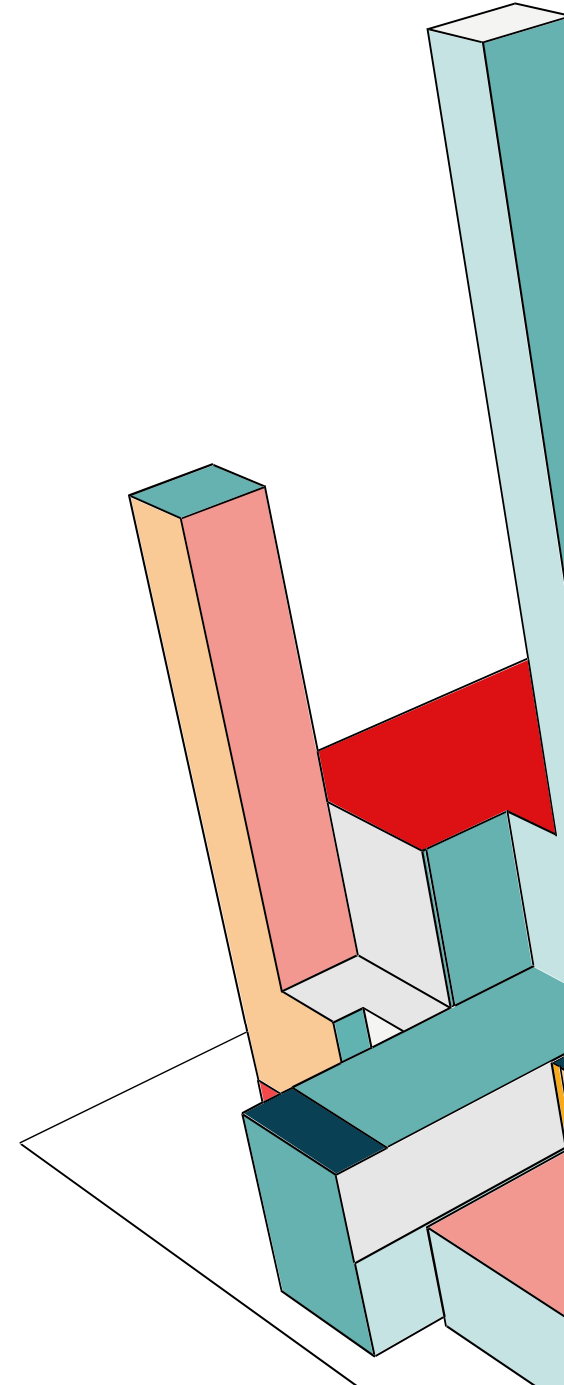

DATA STRUCTURES AND ALGORITHMS

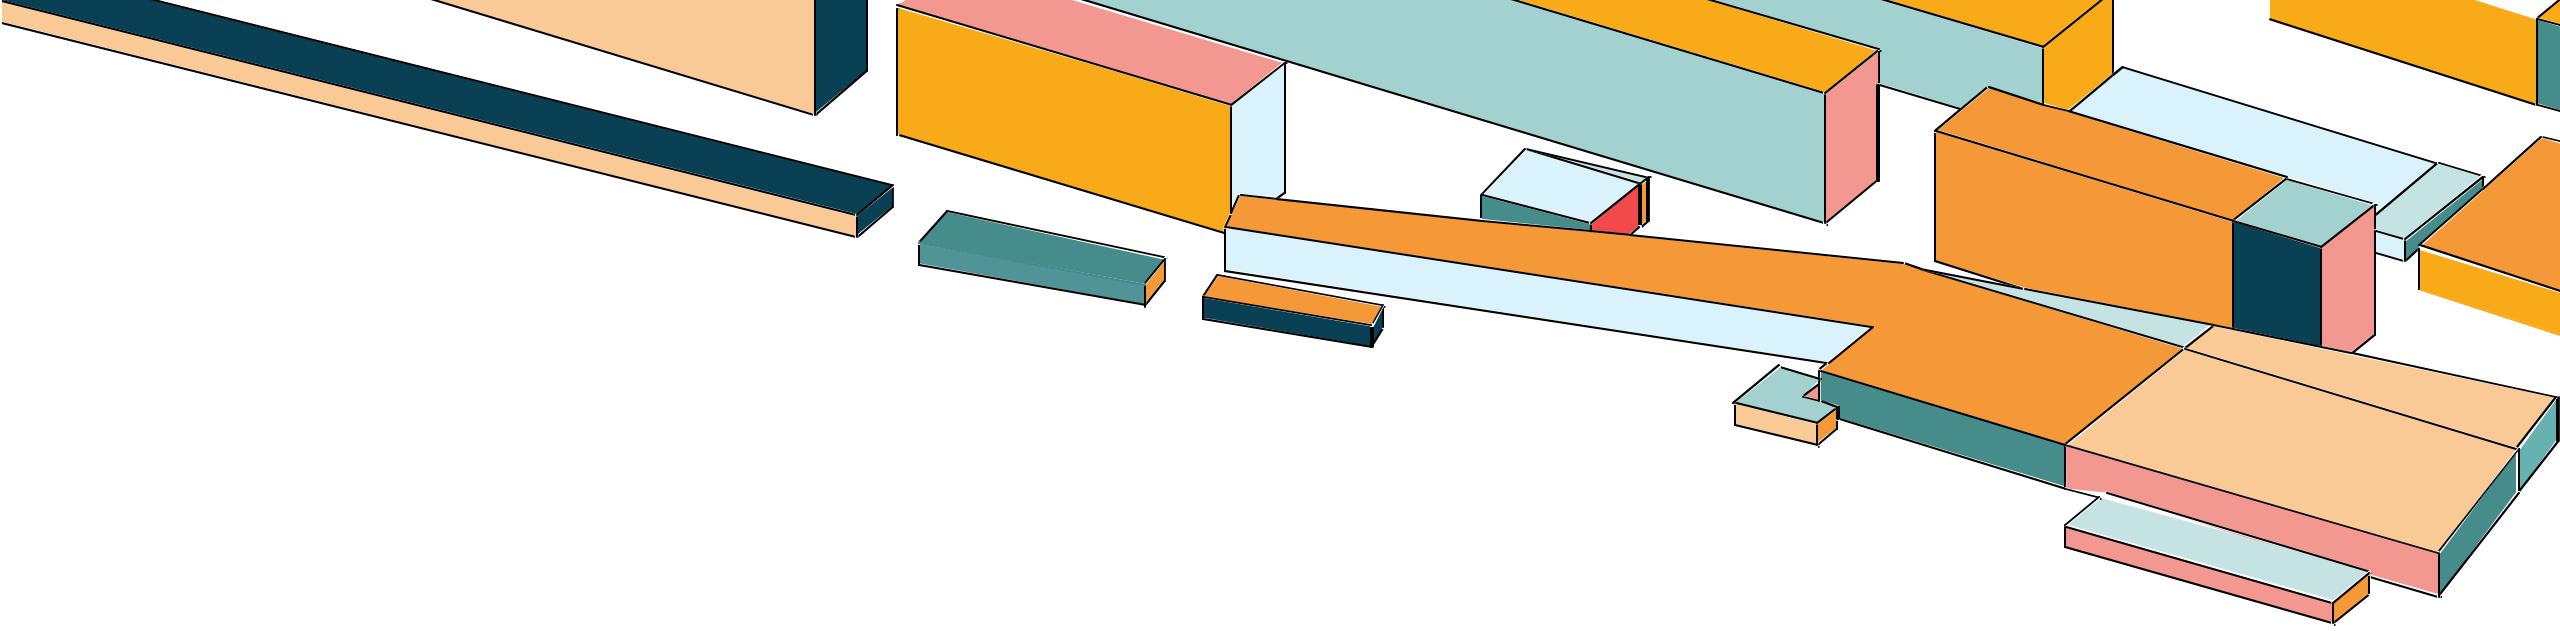

- Geeksforgeeks - can be a quick solution to preparing DSA effectively and it will give questions as well as theory.
- Striver - If you want to go through a concept and learn the basics, striver is also a nice resource.
- IITK Notes - This will cover the essential theoretical parts.
- InterviewBit - Solve only the difficult and moderate level questions, and that too not in the trivial topics. Solving the whole website is simply time wastage.

SYSTEMS

- **OOPS** - CS253 OOPS section slides are good to start off. Also an excellent resource for C++ with a focus on OOPs, very helpful in SDE and HFT systems interviews: Cherno (YT Playlist)
- **CS220** - Not all of CS220 content is asked, particularly you need to focus on caches and pipelining

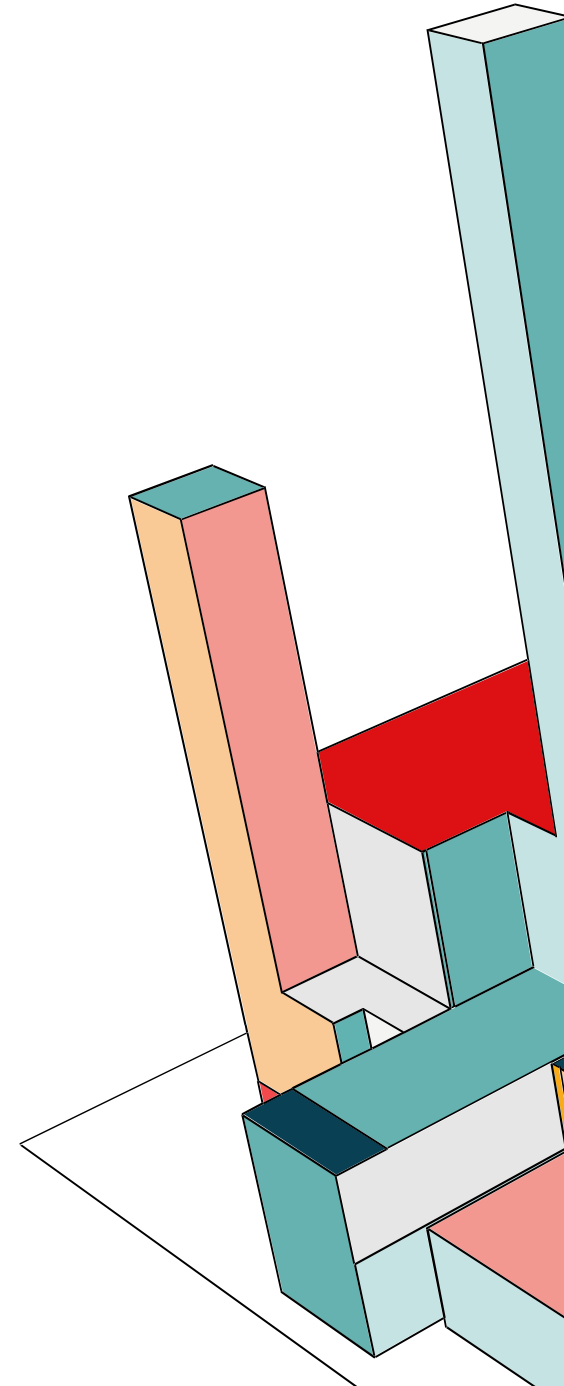

OUR EXPERIENCES...

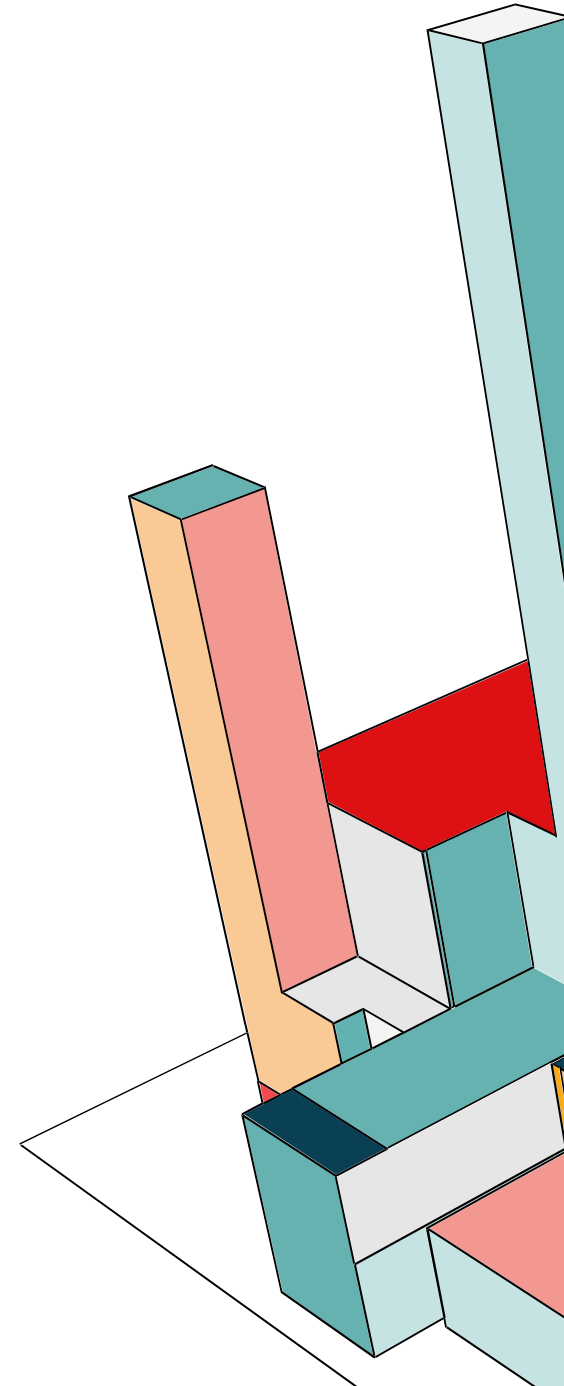

GRAVITON RESEARCH CAPITAL LLP

- Test - Offline, On-paper test in the presence of company's HR,
- Subjective questions on general maths, PMI, probability, PIE etc .
- Duration ~ 2hr
- 3 Interview Rounds

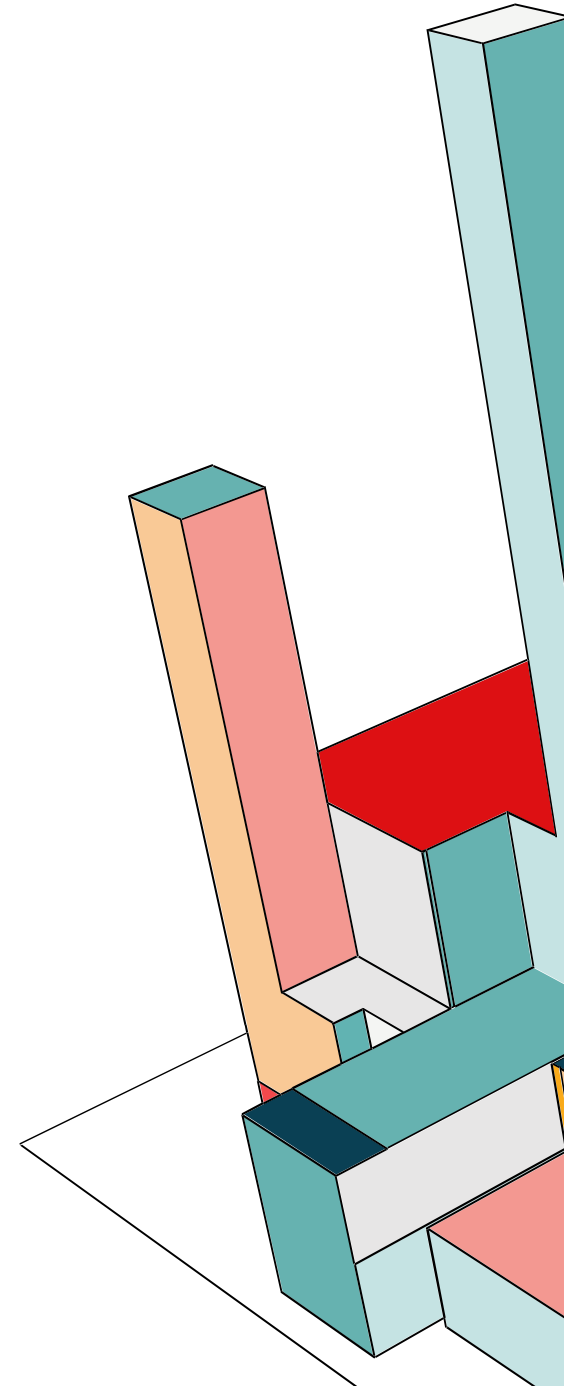

GRAVITON RESEARCH CAPITAL LLP

- Round 1&2 : Probability, Puzzles & Reasoning (30-40 Mins)
 - They check not just the answer, but the approach. If you are not getting to the answer they will provide you hints/
 - A mix of standard probability questions and medium-hard difficulty puzzles.
 - Some questions on Resume, campus activities etc.
- Round 3: Will ask mostly about campus experience. Key is to be confident. Don't take this round lightly at all. duration ~ 10-20 mins

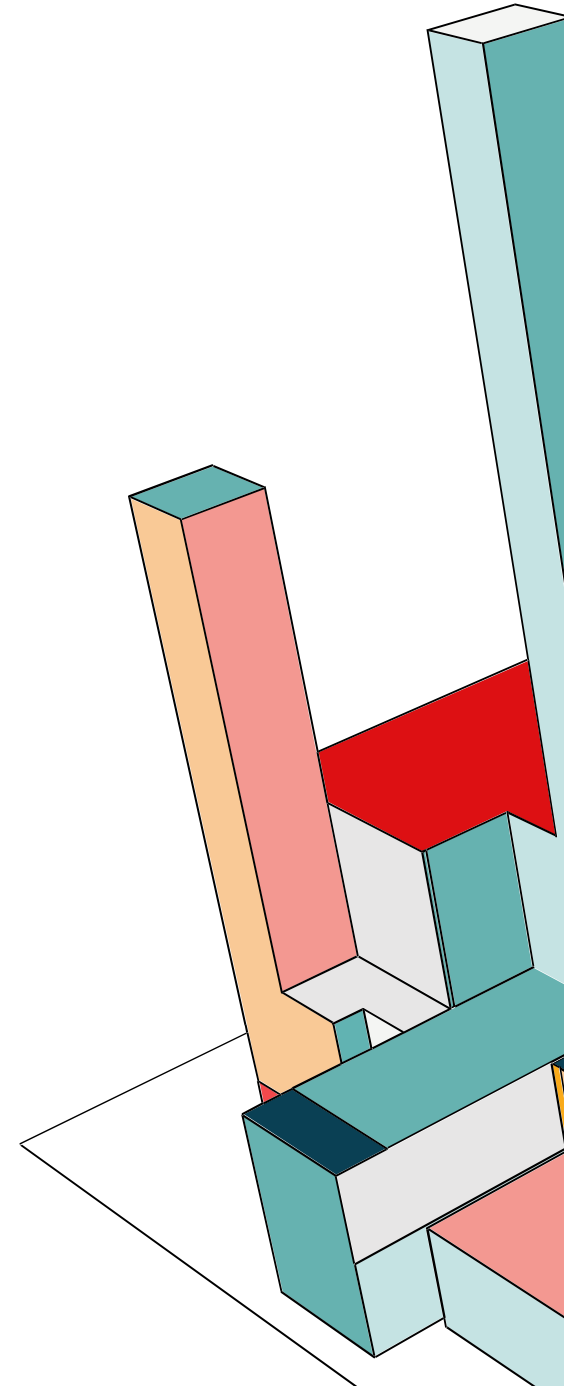

TREXQUANT

- Test – so basically there is no test
- Shortlisting is done on the basis of a campus-wide hangman challenge

TREXQUANT

- Interview - 3 rounds
- 1st round - Basically explaining the hangman challenge, some resume questions, some prob/stats questions. Duration ~ 40 mins
- 2nd round - One medium Leetcode question and resume questions. Duration ~ 40 mins
- 3rd round - Live coding round. Duration ~ 40 mins
- Note - Trexquant will judge you on the basis of how good you can code in **python**.

THANK YOU!!

We are open to questions, please feel free to ask
